

PZL M18B Dromader

Polish Cropduster Aircraft - two-seater

Cat. No. 48002
Scale 1/48

3d Design:
Georgios Stefanidis
Marek Możdżeń

The PZL M-18 Dromader is a Polish single-engine, low-wing utility aircraft designed in the late 1960s and early 1970s by PZL-Mielec, with its first flight taking place in 1976. Originally developed as an agricultural aircraft for crop spraying and fertilizing, it was engineered to be exceptionally robust, capable of operating from short and unprepared airstrips. Powered by a strong radial piston engine and equipped with a large central hopper, the Dromader can carry significant loads of liquid or chemicals, which made it one of the largest and most capable aircraft in its class.

Thanks to its strength, simplicity, and versatility, the Dromader was widely adapted for roles beyond agriculture, most notably aerial firefighting, but also forest protection and pest control. Hundreds of aircraft were produced and exported to dozens of countries across Europe, the Americas, Africa, and Australia. The type earned a reputation for reliability in demanding conditions, including high temperatures and mountainous terrain, and remains in limited service today, particularly in firefighting roles, often upgraded with modern avionics and mission-specific equipment.

PZL M-18 Dromader to polski, jednosilnikowy samolot użytkowy w układzie dolnopłata, zaprojektowany pod koniec lat 60. i na początku lat 70. w zakładach PZL-Mielec, który po raz pierwszy wzbił się w powietrze w 1976 roku. Konstrukcja powstała z myślą o pracach agrolotniczych, takich jak opryski i nawożenie upraw, dlatego samolot cechuje się dużą wytrzymałością, możliwością operowania z krótkich i nieutwardzonych pasów startowych oraz znaczną ładownością. Mocny silnik tłokowy i duży zbiornik na środki chemiczne pozwalały na efektywną realizację intensywnych zadań roboczych.

Dzięki swojej solidności i uniwersalności Dromader znalazł zastosowanie także w innych rolach, przede wszystkim jako samolot gaśniczy, a także w ochronie lasów czy zwalczaniu szkodników. Wyprodukowano kilkadziesiąt egzemplarzy, które trafiły do wielu krajów na całym świecie. Samolot zyskał opinię niezawodnego i skutecznego w trudnych warunkach klimatycznych i terenowych, a część maszyn pozostaje w eksploatacji do dziś, często po modernizacjach obejmujących nowoczesną awionikę i wyposażenie specjalistyczne.

HATAKA HOBBY PAINTS!

Use decal 44 or both side of fuselage, or 43 just on the left, never together.

Nałóż elementy 44 po obu stronach kadłuba, lub element 43 tylko po lewej.

PZL M18B Dromader SP-ZUS, PZL-Warszawa, Białystok-Krywlany Airport, May 2021
PZL M18B Dromader SP-ZUS, PZL-Warszawa, Lotnisko Białystok-Krywlany, maj 2021

This aircraft can also be painted in white, like schemes 1 and 2. In this case use decal 24 instead of 25 and 29 instead of 30.

Ten samolot może być również pomalowany na biało, analogicznie do schematów 1 i 2. W takim wypadku użyj kalkomanii 24 zamiast 25 i 29 zamiast 30
